Multi-Stream Nozzle

RESIDENTIAL & COMMERCIAL IRRIGATION

Built on Innovation

MP ROTATOR: USE UP TO 30% LESS WATER

MP ROTATOR®: MULTI-STREAM NOZZLES

The MP Rotator is irrigation just as nature intended. It slowly emits water via multiple rotating streams, rather than a constant spray of water, which can essentially flood a landscape. The MP Rotator delivers water at a more steady rate that matches the soil's natural need.

The slower application rate of the MP allows water to gently soak into the soil, and achieves even distribution throughout the irrigated area. The result of this process is a 30% reduction in water use, and significantly healthier landscapes.

The MP Rotator can be installed on any spray head or shrub adaptor. For best results, use the pressure-regulated Hunter PRS40. Regardless of which head the MP is paired with, immediate water savings will occur.

RELIABLE

Patented “double-pop” feature keeps the sprinkler free from external debris, resulting in extreme reliability

EFFICIENT

Rotating nozzle produces multiple water-saving streams

ACCURATE

Adjustment ring assures the irrigation of the exact target area, not the sidewalk or surrounding area

DURABLE

Removable inlet filter keeps sprinkler free from internal debris

SIMPLE

Installs easily on all Hunter Spray bodies

Application: **Residential/Commercial**

Benefit: **Proven Water Saver**

THE MP ROTATOR is being recognized by many cities for its water saving capabilities. It has played a big part in rebate programs across the country, and consistently improved landscape health. These are just two of the many reasons why the MP Rotator has become one of the most sought after products in the irrigation industry.

MP ROTATOR: *A Smarter Way to Water*

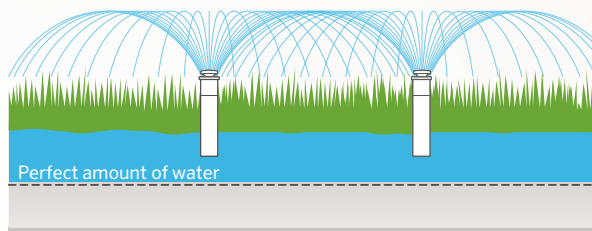

Water Usage Benefits

- Low application rate virtually eliminates wasteful runoff
- Less water use results in lower water bills
- Uses 30% less water than traditional sprays

Why Choose MP Rotator?

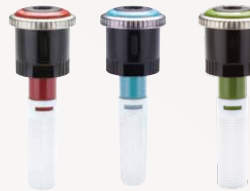

- Multiple rotating streams provide excellent coverage and uniformity, which eliminates dry spots
- Better wind resistance and less misting
- Perfect for slopes and dense soils
- Easily adjustable
- Proven durability in demanding conditions
- Installs easily, saves water immediately
- New MP3500 provides coverage from 31'-35', the first-ever multi-stream solution for this distance
- Broad array of models available to fit any landscape

Here's How it Works

Water is delivered at 0.4" per hour, more closely matching what typical soils can absorb. This adds up to approximately 30% water savings with extended run times.

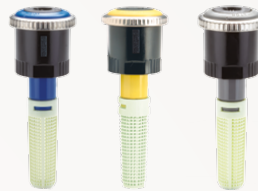

MP1000 8' to 15' radius

MP2000 13' to 21' radius

MP3000 22' to 30' radius

MP3500 31' to 35' radius
